

Marketing Measurement

ON TRACK

Priorities and progress · Updated 18 June 2026

1

Demo conversion tracking

per market

IN PROGRESS

Demo-request conversions firing and counted correctly in each market.

UK

Confirmed and recording

FRANCE

Diagnosed, fix pending

SPAIN

Firing but overcounting, needs the form-GUID trigger

2

Paid attribution and source truth

NEAR COMPLETE

Paid's real contribution measurable, with the true source preserved end to end.

GA4 REATTRIBUTION

Method in place, paid measurable at the aggregate

DYNAMICS SOURCE OVERWRITE

Being closed on the RevOps side, not yet stopped

3

UTM standardisation rollout

IN PROGRESS

One tagging standard applied across paid, so every click carries a clean source.

Standard defined, rollout in progress. Was gated on the tracking fix.

4

Lead MQL and SQL conversions

UK and Spain

NOT STARTED

Qualified-stage conversions fed back so paid can optimise to pipeline, not just leads.

Gated on the offline-conversion upload feed question to RevOps.

5

Offline conversion feed

CRM to Google Ads

PENDING

Closed and qualified events sent back to Google Ads for optimisation.

Pending RevOps confirmation it exists or is planned.

6

LinkedIn to CRM

LIVE

LinkedIn leads flowing into the CRM and nurtured automatically.

Sync verified and live. Native lead-gen nurture workflow still open with RevOps.

7

Form CRO

shorter forms

APPROVED

Shorter forms to lift conversion rate on the key landing pages.

Approved by the VP and RevOps. Implementation pending, in build.
