

Marketing channel mix & ROI

Won deals and revenue from Dynamics, with demo and website reattributed to the arrival channel measured in GA4. Jan 2025 to Jun 2026.

Inherited baseline, not a current scorecard. 18 months to 15 June 2026, run by external agencies. New ownership from 6 May 2026, so changes since land in closed-won from Q4.

MARKET

All marketsUKSpainFrance

Showing 187 won deals, full 18 months. Deal counts, revenue and channel mix filter by period. Spend, ROI, the channel-type split and the GA4 mix stay full period.

Won deals

SELECTED PERIOD

187

Marketing-sourced deals won in the selected window.

Won revenue

SELECTED PERIOD

€941k

First-year value of all won deals, all sources.
Full 18 months.

Paid media spend

FULL PERIOD

€395k

Google, LinkedIn, Meta & Microsoft. Full period, does not change with the period selector.

Paid-sourced wins (est.)

SELECTED PERIOD

52

GA4-reattributed estimate, demo plus website. Not counted.

Counted, paid is #2 by closed-won, 20 of 114 over the trailing 12 months. The 52 above hands the demo and website buckets back via GA4, an estimate, not a replacement for the counted floor.

Inherited setup, what these measure

- External agencies, bidding for clicks not customers
- Tracking partial, so paid was undercounted
- Spend thin, some on the wrong products

Changed since new ownership, not yet in these deals

- Spain rebuilt to four clean campaigns
- France waste paused (PMax, Microsoft France)
- Tracking rewired, France UTM fixed

Won deals by channel

SELECTED PERIOD

After handing the demo and website buckets back to the channel each visitor arrived through. GA4 estimate.

Paid		52
Organic Search		48
Direct		24
Marketing Event		23

Organic Social		1
Other		1

GA4 reattributed estimate. Filters with the period selector.

How demo & website were reattributed

FULL PERIOD

GA4's measured channel mix, applied to the demo and website wins.

Organic Search 40%

Direct 21%

Paid 14%

Referral 9%

Email 9%

Unattributed 8%

Paid ROI by market

FULL PERIOD

Counted paid first-year revenue against paid spend, full 18-month period. Both horizons are shown so per-market and blended read on the same basis.

MARKET	PAID SPEND	PAID 1-YR REV	ROI 1-YR	ROI 3-YR
UK	€121k	€55k	0.45x	1.35x
Spain	€132k	€73k	0.56x	1.67x
France	€141k	€18k	0.13x	0.38x
All (blended)	€395k	€146k	0.37x	1.11x

ROI 1-yr = paid first-year revenue / paid spend. ROI 3-yr applies a 3-year customer lifetime (first-year revenue times 3, no churn or expansion assumed). Blended first-year is 0.37x, the headline figure; two markets clear 1.0x only on the 3-year horizon.

This panel is paid only and full period. The Won revenue figure above covers all sources and changes with the period selector, so the two are not directly comparable.

Counted floor, so it understates paid. France is the rebuild target: spend still includes the waste now cut.

Why demo & website needed reattributing

SELECTED PERIOD

123

won deals (66% of 187) sat in the demo and website last-touch buckets before reattribution. Last-touch credits the form, not the channel that drove the visit; reattribution hands it back.

106

Request a Demo opportunities over the full 18 months, with 17 from Website, a single form that takes the credit for whatever channel actually drove the visit.

Paid by channel type (Search vs Social)

FULL PERIOD

Closed-won paid deals split by channel type, from the Dynamics source. This is the reliable cut paid carries today. Full 18-month period.

Paid Search

35

Paid Social

1

35 plus 1 of the 36 paid closed-won deals.

ROI by channel type is not computable from the inherited baseline

Paid spend is recorded by market (UK, Spain, France), not split by channel type. A per-channel ROI would require inventing a Search vs Social spend split, so it is held rather than estimated. To unlock it, the platform export needs spend broken out by channel type.

Paid Social.

One closed-won deal in the inherited baseline (n=1). The social campaigns are recent, so they are read on pipeline and early indicators, not on closed-won. A single deal is not a stable channel return.

Platform split (Google, LinkedIn, Microsoft).

Attribution-dependent while the UTM rework is unfinished. Held as indicative until tracking is clean.

Sources. Dynamics (007/009), GA4 channel mix, platform billing (€394,741, EUR, June partial). Reattribution shows where paid was present, not that it caused the win; last-touch crediting, not missing data. A geo holdout is the next test.
